## OUR NEW PATHS, SCANS & GREENS

Mr Yong Yih Ming  
Chief Operating Officer, IHH Healthcare Singapore  
Chief Executive Officer, Mount Elizabeth Hospital

Dear Colleagues

Project Renaissance has amalgamated and relocated services in Mount Elizabeth Hospital (MEH) so that they can better serve our patients and provide a more integrated and productive care environment for our doctors and staff. In addition, the reconfiguration has resulted in "100m corridors" on every floor to facilitate patient and staff movements efficiently.

In this edition, I will provide an overview of our new "100m corridors" and updates on 3 key assets that have benefitted from the major reconfiguration plans, and the return of one of our gardens:

1. Our "100m Corridors"
2. Radiology Complex
3. Radiation Oncology Centre
4. Nuclear Medicine Centre
5. Heritage Garden

# New Dedicated Patient, Staff and Public Circulation

Separate corridors and lifts to improve privacy, boost interdependencies and enhance experiences for all.

## "100m Corridors"

One of the objectives of Project Renaissance was to create "clean and dirty" corridors to streamline circulation while maintaining dignity of our patients by using service corridors for transfer. Relative to this, we strategically position ancillary services like Radiology, Radiation Oncology, Nuclear Medicine, Pharmacy, Laboratory, Rehabilitation and Urgent Care Centre along these corridors.

This arrangement facilitates efficient patient movement in a logical and integrated manner. We now have nine "100m Corridors" across various levels in MEH following the renovations

At Level

- 1
- 2
- 3
- 4
- 5

Our Level 2 now has 3 "100m Corridors" – One vehicular road, One public corridor, and One service corridor. These parallel corridors connect all the public and service lifts to all the clinical and ancillary assets throughout the hospital.

# RADIOLOGY COMPLEX

LEVEL 2

MOUNT ELIZABETH HOSPITAL

The new Radiology Complex amalgamates at least 5 different radiology units in the past into one single mega footprint. The entire footprint is now 16,778sf and is est20% bigger. Over 10% of Project Renaissance's budget has gone into the building and equipping of our new complex.

Beyond the usual diagnostic equipment like X-rays and ultrasounds, the Centre boasts many state-of-the-art equipment.

and Interventional  
procedure

# Radiation Oncology

Level 2

Mount Elizabeth Hospital

Waiting Areas

The centre has undergone rejuvenation, enhancing both its waiting and consultation areas. Part of its original space will be incorporated into the upcoming Urgent Care Centre (UCC).

Entrance

Consultation Room

# NUCLEAR MEDICINE

The new Nuclear Medicine Centre was re-located and reconfigured at Level 1 to accommodate the new MEH Carpark Lobby and staff corridor. It was opened in phases and is now fully serving patients together with the two new Radionuclide Therapy single rooms at ward 5C.

Entrance

SPECT CT

Patient corridor

# Heritage Garden

Our garden at Level 4 was officially re-opened as our Heritage Garden on 22 October 2025 via a major tree planting event in conjunction with World Sustainability Day on 29 October 2025 this year. We involved all stakeholders from the Medical Advisory Boards, Specialty Interest Groups, MCST Council, PLife REIT and all categories of staff members to plant 15 trees which would form a key feature of our rejuvenated garden.
